Lanyards are the critical link in any fall protection system
MILER LANYARDS
Throat Opening

 Longer gate permits lower hand position on a Miller snap hook, freeing the throat opening from obstructions. Clearance remains 3/4” with hand or 1/8” with glove.

COMPETITOR
Throat Opening

 Shorter gate causes hands to interfere with throat opening, reducing clearance to 1/4” with hand and 1/8” with glove.

MILER LANYARDS
Locking Mechanism

 Tamper-proof, locking mechanism design on a Miller snap hook increases reliability by minimizing the potential for misuse.

COMPETITOR
Locking Mechanism

 Exposed locking tab can be easily bent or broken placing a worker at risk because the snap hook may not be securely attached.

MILER LANYARDS
Snap Hook Construction

 Restricted access spring design on a Miller snap hook minimizes the potential for damage or tampering.

COMPETITOR
Snap Hook Construction

 Easy access spring design allows for damage & tampering.

MILER LANYARDS
Webbing and Stitching Integrity

 Consistent 3-point tack stitching pattern along with heavier thread produces a stronger Miller lanyard. Webbing meets a minimum tensile strength of 6,000 pounds for superior performance. Overstitching the ends of the webbing prevents catching or snagging.

COMPETITOR
Webbing and Stitching

 Lightweight stitching pattern will not wear well and may offer poor strength. Webbing must meet the minimum tensile strength of 5,000 pounds required by OSHA. Unsewn webbing ends may snag and tear.

MILER LANYARDS
Proper Labeling

 M Proper ANSI Z359.1 labeling:
• part no. and model designation
• year of manufacture
• manufacturer’s name/logo
• capacity rating, standard number (Z359.1)
• warning to follow the manufacturer’s instructions
Miller lanyards meet these labeling requirements and more:
• an inspection grid for inspection record
• directional arrows for proper use
We also offer third-party certification on most popular styles to support our claims.

COMPETITOR
Labeling

 Insufficient labeling probably indicates a product does not meet ANSI requirements. Insufficient labeling forces end-user to make assumptions when selecting or using a lanyard. Demand proper labeling – reduce liability risks from improper use.
Warning labels and instructions in three languages to meet the demands of a broad user base. Reassures understanding by user, as well as proper use and added safety. Furthermore, English and French translations meet CSA standards.

Unique trilingual warning flag provides visual proof that a Miller lanyard has been involved in a fall and should be removed from service.

MILLER LANYARDS Trilingual Labels & Instructions

Warning labels and instructions in only one language increase the chance of misinterpretation and misuse.

COMPETITOR Single Language Labels & Instructions

MILLER LANYARDS Quality Components

All Miller lanyards are constructed entirely of North American-made components, assuring quality workmanship.

COMPETITOR Components

MILLER LANYARDS Testing Capabilities

• 100% proof testing of hardware.
• Voluntary third-party testing of most popular styles of Miller lanyards ensure performance standards.
• In-house testing facility.
• Statistical Process Control (SPC) of raw materials to assure quality.
• Meet applicable ANSI, OSHA and CSA requirements.

COMPETITOR Testing Capabilities

• Is hardware proof tested?
• Is third-party testing offered by the manufacturer?
• Is there an in-house testing facility to ensure proper product performance?
• Is the quality of raw materials assured?
• Do lanyards meet all applicable ANSI, OSHA and CSA requirements?

COMPETITOR Components

Many lanyards require actual physical measurements to determine if they are still usable. Without a readily visible indication, the potential exists for a worker to unknowingly use a lanyard that has been involved in a fall.

COMPETITOR Wear Pads?

No wear pads increases the possibility of premature wear.

COMPETITOR Wear Pads?

Without a readily visible indication, the potential exists for a worker to unknowingly use a lanyard that has been involved in a fall.

COMPETITOR Warning Flag?

No wear pads increases the possibility of premature wear.

COMPETITOR Wear Pads?

Warning labels and instructions in only one language increase the chance of misinterpretation and misuse.

COMPETITOR Single Language Labels & Instructions

D MILLER LANYARDS Wear Pads

Wear pads provide additional protection around hardware/webbing connections, increasing Miller lanyard durability and work life.

**Miller® Manyard® Shock-Absorbing Lanyards**

- Over 20 years of design refinement
- Special woven shock-absorbing inner core reduces fall arrest forces
- Heavy-duty tubular outer jacket serves as a back-up web lanyard
- Unique warning flag provides visual proof that a lanyard has been involved in a fall and should be removed from service

**Miller® Manyard® II Stretchable Shock-Absorbing Lanyards**

- Unique stretchable design offers greater maneuverability and safety
- When contracted to four feet, Manyard II greatly reduces the chances of tripping, snagging or dragging
- Integral bright red core makes visual inspection easier and more reliable
- Webbing protected with Tyflon®HT* for an invisible finish that provides superior water/oil repellency and protection against grease, dirt and grime

**Miller® StretchStop® Lanyards w/SofStop® Shock Absorber**

- Includes field-proven Miller SofStop Shock Absorber with unique back-up safety strap
- Stretches from 4 to 6 feet
- Stretchable design offers greater maneuverability and safety
- When contracted to four feet, StretchStop greatly reduces the chances of tripping, snagging or dragging
- Webbing protected with Tyflon®HT* for an invisible finish that provides superior water/oil repellency and protection against grease, dirt and grime
- All-in-one lanyard with SofStop Shock Absorber and cross-arm anchorage connector
- Heavy-duty polyester webbing with five times more abrasion resistance
- Webbing protected with Tyflon®HT* for an invisible finish that provides superior water/oil repellency and protection against grease, dirt and grime
- Unique warning flag provides visual proof that a lanyard has been involved in a fall and should be removed from service

**Miller® BackBiter™ Tie-Back Lanyards**

- Designed from top to bottom for tie-back use
- Patent-pending 5K™ Snap Hook is the first snap hook with a 5,000 lb. (22kn) gate load capacity from any angle
- Reduces tripping hazard
- Yes, you can "Tie-back" safely!
